

WHAT IS CLAIMED IS:

1. A composition comprising an immunogenic peptide having a supermotif which allows the immunogenic peptide to bind more than one HLA molecule, the immunogenic peptide having between about 9 and about 10 residues;
5 a first conserved residue at the second position from the N-terminus being P; and
a second conserved residue at the C-terminal position being selected from the group consisting of M, I, and an aromatic residue.
- 10 2. The composition of claim 1, wherein the immunogenic peptide is selected from the group consisting of SEQ. ID. Nos. 1-21.
- 15 3. A method for inducing a CTL response in a patient, the method comprising administering to the patient a therapeutically effective dose of the immunogenic peptide of claim 1.
